

1 The equation of a line is $y = 2x - 7$.

(i) Write down the gradient of this line. [1]

(ii) Write down the co-ordinates of the point where this line crosses the y-axis.
(.....,) [1]

2 The equation of a line is $y = 5 - 4x$.

(i) Write down the gradient of this line. [1]

(ii) Write down the co-ordinates of the point where this line crosses the y-axis.
(.....,) [1]

1 The equation of a line is $y = 2x - 7$.

(i) Write down the gradient of this line. [1]

(ii) Write down the co-ordinates of the point where this line crosses the y-axis.
(.....,) [1]

2 The equation of a line is $y = 5 - 4x$.

(i) Write down the gradient of this line. [1]

(ii) Write down the co-ordinates of the point where this line crosses the y-axis.
(.....,) [1]

(ii) Write down the co-ordinates of the point where this line crosses the y-axis.
(.....,) [1]

1 The equation of a line is $y = 2x - 7$.

(i) Write down the gradient of this line. **2** [1]

(ii) Write down the co-ordinates of the point where this line crosses the y -axis.

(**0** , **-7**) [1]

2 The equation of a line is $y = 5 - 4x$.

(i) Write down the gradient of this line. **-4** [1]

(ii) Write down the co-ordinates of the point where this line crosses the y -axis.

(**0** , **5**) [1]
